

The right education for today's children

The article will be discussed about Olga Jurkowski that was able to find a way to teach their children that they were ready for life tomorrow, and not yesterday's life, which serves schools and universities. In the end there are video clips, links to useful sites, collection of excellent articles on modern education.

Membership

As you can see, over the past 100 years the world has changed. And now changes are happening so quickly that not everyone is able to adapt and live in harmony with the new world that is radically different from the world in which lived a century ago. Sad to realize, but our education is very far behind the modern world.

We live in the information era in which important is the ability to find information, process and use it. At that time, as a standard education teaches us to remember outdated information, for the most part suitable in the industrial age.

It doesn't matter now knowing the formulas of all the chemical elements, dates the reign of kings, etc. Now it is important the ability to use modern information means to in a very short time to find the right information that will help to achieve this goal (it can be learning new skills, advice on lifestyle changes and workflows to achieve maximum results, etc.), if necessary, to remember her and benefit from her practical skills.

Whom cooking schools and universities?

Students after 10 or more years of education come to College and realize that you can forget everything taught in school, because it is not useful. Students in five or more years of training come to work and understand that it is possible to forget what was taught in high school because the work is not useful. It turns out that children are prepared for the world that doesn't exist. And it is sad that this take more than 15 years of the most productive period in a person's life.

"I did everything that school does not interfere with my education" mark TWAIN

What does a correct education for today's children?

The main thing that gives the correct education is knowledge and skills that will be useful to students. This means that 99% of the information the school program is no longer.

The second important element is the ability to study effectively, for example, tutoring is 1 hour better to master the course material than in a week of schooling; this is ten more times and saves time spent on training. Courses of several months can replace the 5-year study at the University.

Why not use modern education?

It would seem that there are so many positive aspects in the fundamental change in education. Then why don't they happen? Very simple. Let's face it, who needs it and not need it:

The world and the state — the ruling class of the society need a grey mass of people, which is easy to operate and to get maximum money with minimum investment.

Enterprise — we need people who are willing to work for minimum wage, to extract from the use of them the maximum profit.

Schools and Universities — they are subordinated to the state (see paragraph 1).

Family:

- 1) the majority of parents spend all day at work so need somewhere to hand over the child to him not to worry;
- 2) much easier to shift the responsibility for education and upbringing of the child to others;
- 3) we are so tired from work and poor lifestyle that not enough enthusiasm and energy to guide them on their child's improvement;
- 4) we used to think and live like everybody else, not how.

Children; they understand [what is a custom essay writing service](#) that they give gold, but there's nothing they can do, but to go against his family, school and the whole educational system.

What should be done to provide modern education to your child?

1. To accept that society can be wrong.
2. Be aware that grades and diplomas are not help to become successful and happy.

3. Note that now there are many sources to obtain the necessary knowledge and skills.
3. To see what other learning options.
4. To choose the most suitable training option for your child.
5. Give the child the opportunity to gain the necessary knowledge and skills that will be useful to him in adult life.

Home education (homeschooling)

One of the variants of modern education **home or family education**. This does not mean that you are going to sit around with the baby in the middle of the books, it does not mean that your child is not socialized, this does not mean spending a lot of money on education. In fact, the opposite is true! The information below about the mom who found the opportunity to give their three children a home education. Get to know this wonderful mom and her experience, maybe it will inspire you.
